HealthAsyst Patient Check In Kiosk

HealthAsyst Patient Check In Kiosk makes the check-in process convenient for patients by allowing them to identify themselves upon arrival at the facility; view and confirm demographic and insurance information, electronically sign consent documents and make payments.

Streamline Patient check-in

HealthAsyst Patient Check In Kiosk helps patients check-in rapidly, eliminates long queues and congestion at the front desk, reduces the use of clipboards and minimizes errors in data entry. Patients login securely, select their appointment, verify data, sign consent forms digitally and make payments at the kiosk.

Improve Revenue Collection

By facilitating up front collection of co-payments and other patient dues, HealthAsyst Patient Check In Kiosk helps improve cash collections.

Protect Patient Privacy

While secure login options such as Biometrics ensure data security, privacy filter ensures that kiosk transactions can only be viewed by the patient standing directly in front of the Kiosk.

When the system exceeds user defined idle time limit, a multimedia screen saver gets activated. This prevents inadvertent exposure of the patient's information.

Improve Quality of Care

Health Management Alerts and targeted patient messaging are features that facilitate enhanced patient communications and quality of care.

Easy Manageability

- Check-in status of patient
- Kiosk usage statistics reports
- Kiosk health monitoring
- Help request alert
- Access control

Rich Functionality

- Appointment check-in
- Secure patient identification
- Consent form viewing and e-signature
- Outstanding balance and co-pay collection
- Alert notification
- Facility directions

Directory Services and Way Finder

HealthAsyst Patient Check In Kiosk incorporates a powerful solution for directory information, enabling HCOs (Health Care Organizations) to better serve their visitors with automated facility directions. This solution allows patients to easily locate exam rooms, labs and other locations in the HCO campus, using their floor map with up to date information.

High Flexibility

- Define workflows
- Configure content of each screen
- Change button shapes and captions
- Create customized content for each department
- Set rules to display content selectively
- Set aging conditions for dynamic content display
- Customize alerts in monitoring software

Integrate with existing systems

The solution consists of a rich and extensive set of components such as APIs and web services that allow ease of integration with external systems (such as PMS, EMR, ADT or HIS), with minimal implementation work and no programming.

Additional Application Features

- Multi-language options enable non-English speaking patients to use the system.
- Receptionist Dashboard enables staff to monitor the check-in status of each patient using the kiosk; manage the patient queue, and track patient wait times. Alerts notify staff of instances when patients need help during their check-in transaction.
